Art Unit: 3721

Response to Amendment

1. This action is in response to Applicants' amendment received on August 21, 2003.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1, 4 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by Doberne (USPN 3,602,419).

In reference to claims 1 and 26, Doberne discloses an adapter for converting a hammer tool into a multiple-impact object driving tool, the hammer tool having a housing with a barrel portion including a rear section and a nose section, the hammer having a reciprocating impact member (12), the adapter comprising: a shroud (19) for removably mounting on the hammer tool (11), having a bore (45) formed through the upper shroud between a forward and rearward end, the rearward end of the shroud removably receiving a portion of the hammer device; a drive punch (27) positioned in the bore (45) of the shroud (19) with a rear section for being impacted by the reciprocating impact member (12) and a forward end (22) for impacting an object (25) to be driven; and a guide bushing (18) extending forwardly from the shroud (19), having a forward and rearward end, a channel (20) extending through the guide busing (18) between the forward and rearward ends for receiving a portion of the object (25) to be driven, the guide bushing (18) being slidably mounted (figures 2-3) on the front portion of the shroud (19) such that the guide bushing (18) is movable between an extended position (figure 2) and a retracted position (figure

Art Unit: 3721

3); wherein the channel of the guide bushing (18) has a length and the length is uniform in diameter along the entire length.

In reference to claim 4 and its limitations as stated above, Doberne discloses an adapter for converting a hammer tool into a multiple-impact object driving tool additionally comprising a biasing means (31) for biasing the guide bushing (18) into an extended position (figure 2) with respect to the shroud (19).

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Doberne (USPN 3,602,419) in view of York (USPN 4,030,654).

In reference to claim 7 and its limitations as stated above, Doberne discloses an adapter for converting a hammer tool into a multiple-impact object driving tool wherein the shroud (19) has an outer surface, the outer surface of the shroud having a substantially cylindrical front and rear part. Doberne does not disclose the shroud (19) including a frusta-conical intermediate part. York teaches a hammer tool having frusta-conical shroud (12) for the purpose of preventing the shroud from abutting with any adjacent walls or objects that would interfere with the positioning of the hammer tool (column 2, lines 10-14). It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the shape of Doberne's shroud to the

Art Unit: 3721

frusta-conical shape of York for the purpose of allowing the hammer tool to be better positioned while driving a fastener.

Allowable Subject Matter

- 6. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. Claims 15-17 and 20-25 are allowed.

Response to Arguments

8. Applicant's arguments filed August 21, 2003 have been fully considered but they are not persuasive. In response to Applicant's argument that the language "a length" overcomes the structure of Doberne, Examiner disagrees based on the fact that the language "a length" does not exclude the possibility of there being more than one length associated with the guide bushing.

Doeberne is deemed to disclose "a length" of the guide bushing (18) having a uniform diameter.

Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gloria R Weeks whose telephone number is (703) 605-4211. The examiner can normally be reached on 7:30 am - 6:00 pm Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi I Rada can be reached on (703) 305-2187. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9302 for regular communications and (703) 872-9303 for After Final communications.

Art Unit: 3721

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-1789.
